Generating updates, including regression testing, helps keep the code updated with the latest features of AutoCAD. Architectural design AutoCAD is used by architects, designers, contractors, and engineers in architectural and engineering applications, to produce floor plans, sectional drawings, and 3D visualizations of buildings, interiors, and structures. The functionality of AutoCAD has been gradually enhanced over the years, to meet the needs of the modern-day architect. While AutoCAD began as a drafting software, it has since been expanded to include a wide range of features. This has enabled architects to design and produce 3D models, animation, virtual reality, and simulation software. AutoCAD Architecture is an architect's version of AutoCAD for both commercial and non-commercial use. It includes all the usual features of AutoCAD and other products, plus additional features for more efficient architectural design. Architecture in AutoCAD Architecture includes: Working drawings Dynamic views Flexible annotation tools Drawing templates Shadowing Section schedules Site plans Rendering Floor plans Wall sections Doors, windows and openings The Architectural Simulation (AS) module of AutoCAD Architecture creates a dynamic visualization of an architectural design with animated features, such as weather, sunlight, shadows, reflections, and the like. Construction Management AutoCAD Architecture has many features for drafting site plans and project information. It can support managing projects and elements on a database. Moreover, it has tools for generating automatic 2D or 3D drawings. Construction Management (CM) is AutoCAD Architecture's version of Autodesk Project. It allows users to coordinate the design and construction of a building or project. This is done by using the same tools as AutoCAD Architecture, namely dynamic views and drawing templates. Project management includes the following features: Dynamic view of an entire building or project Working drawing Project information Floor plans Site plans Documentation Architectural design AutoCAD Architecture, is used to make detailed design drawings, virtual reality and animation models, as well as 3D visualization tools. As an architectural product, AutoCAD Architecture offers the following features: Dynamic Views Working Drawing Drawing Templates Site Plans Space Planning Rendering Floor Plans Wall Sections Doors, Windows and Openings Building Sections Building Sections Shadows, Reflections, and Animations CAD360, formerly Aut 5b5f913d15
