UltraSearch [2022]

UltraSearch is a handy and reliable program designed to locate files on NTFS hard drives extremely fast, based on user-defined search criteria. UltraSearch Video Guide: UltraSearch Description: UltraSearch is a handy and reliable program designed to locate files on NTFS hard drives extremely fast, based on user-

UltraSearch is an application that can be used to quickly scan through the contents of files on a hard drive, looking for specified words or phrases. UltraSearch is an application that can be used to quickly scan through the contents of files on a hard drive, looking for specified words or phrases. Find what you are looking for... in seconds! UltraSearch has all the features of a file searcher, which you want to have on your PC. UltraSearch was originally developed by anonymous. A major player in the file search category, they created a very powerful file searcher to meet the needs of other computer users. UltraSearch offers: - Wild cards (*.jpg, *.gif, *.bmp) * Wild cards (.txt,.log,...) * Rapidly search large data sets with file size limitations * Search for multiple files at the same time UltraSearch also includes a Context Menu that speeds up your actions. You can easily find all the files you want, then save them to a list. Save the list to disk, email, or make HTML files with the search results. UltraSearch has a separate button that allows you to clear the list of file names you have selected (New Selections). You can also resize the context menu to make it fit your screen and work the way you want. When you are finished, press OK and UltraSearch will resume looking for files. UltraSearch comes with full source and a Free version available. ★★★ UltraSearch 3.0 (2014) For Windows (EXE + ZIP) Key Features: ★ Fast and easy: UltraSearch is the best search utility to find file on a hard drive. It locates or scans for files very fast (within seconds). ★ File Finder: UltraSearch has all the features of a file searcher, which you want to have on your PC: wild card search (files with names ending with *.xxx); search specific file types (*.html, *.jpeg); search for data that is limited by size (files with a size between 100kB and 10MB); search for multiple files at the same time; search recursively for directories; and more. ★ Context Menu: UltraSearch allows you to easily find all the files you want, then save them to a list, save the list to disk, email or make HTML files with the search results. You can also resize the context menu to fit your screen and work the way you want. When you are finished, press OK and UltraSearch will resume looking for

UltraSearch is a handy and reliable program designed to locate files on NTFS hard drives extremely fast, based on user-defined search criteria. Quickly identifies files of interest The algorithm behind it uses the Master File Table (MFT) specific to the NTFS system, which gives it a boost in speed, as opposed to similar applications who first index the drives resulting in a time-consuming operation. This can only benefit users, as the time they spent locating a certain file is drastically minimized. The list of upsides is completed by the program's look and feel, sporting a user-friendly and intuitive interface that makes it fit for all kinds of audiences. Search by keywords, wildcards, and regular expressions Everything comes down to selecting the drive(s) to be searched and entering the keyword(s) of choice, which will result in the program immediately fetching the results. There are possibilities to refine the search operation by defining a list of exclusions based on wildcards, regular expressions or whole names. By default, the application automatically excludes two locations: the Recycle Bin and the System Volume Information and it is recommended that you leave them this way. The results can be saved to a list, as well as sorted by various criteria such as name, path, size, file type, ascending, descending and date changed. Other highlights include the possibility to add a context menu shortcut for quicker access, an option to auto-check new drives and to automatically skip User Account Control warnings. In conclusion On an ending note, we were very impressed by UltraSearch's processing speed. It met our expectations from the beginning, persuading us into making it a personal asset. UltraSearch is a handy and reliable program designed to locate files on NTFS hard drives extremely fast,
